Ayaz's Portfolio

SUMMARY

I work where most projects quietly fail — in the space between code, data, and deployment.

Full-Stack Developer connecting frontend, backend, analytics, and testing into one reliable system.

React · Next.js · Node.js · WordPress · GA4 · Playwright

SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL, Java, PHP, Python, C++, C, HTML5, CSS3

Technologies: Next.js, React, Node.js, Express, WordPress, WooCommerce Data & Analytics: GA4, GTM, Looker Studio, Prophet, ARIMA, LSTM, Hadoop, Hive, Spark Cloud & Infrastructure: GCP, Docker, Kubernetes, MySQL, MariaDB, Supabase, Firebase Specialized & Tools: Playwright (QA), Postman, Figma (UI/UX), Unreal Engine, Pixel Streaming, Digital Marketing, SEO.

PROJECTS

- AI YouTube Command Center** [Project Link](#)
An AI-powered YouTube channel command center built with Next.js and TypeScript. The application integrates full OAuth-based YouTube Analytics across 12+ endpoints (views, retention, subscribers, search terms, per-video breakdowns) and an AI chat assistant with 30+ function-calling tools for on-demand channel insights. It also runs an automated notification system with smart, spam-filtered alerts plus weekly and monthly digests, driven by scheduled GitHub Actions cron jobs, and is deployed on Vercel with production-grade CI.
- Eagle 3D Streaming: Analytics & Business Intelligence Hub** [Project Link](#)
A production analytics platform built with Python, Streamlit, and MongoDB, unifying KPI scraping, full YouTube OAuth analytics, customer-success tracking, and a payment ledger (new vs. recurring revenue) into a secure 10-page dashboard with cookie-based authentication. The system runs a 4x-daily automated data pipeline with 15-minute anomaly detection, 16 types of Telegram alerts.
- EuroEdge Admission Group (WordPress)** [Project Link](#)
A full WordPress and Elementor build for a UK-based international student consultancy. The project delivered a multi-page architecture covering study destinations, English/IELTS course offerings, visa and admission services, and a partner-university network.
- AEG Fournitures – E-commerce Platform (Designed & Built Solo)** [Project Link](#)
A French WooCommerce storefront for moving and packing supplies, designed end-to-end in Figma and built independently on WordPress. The work covered full UI implementation from Figma designs, product catalog structuring across multiple categories, and a complete storefront setup from product listings through checkout, owned solo from concept through launch.
- Things Worth Buying – Website** [Project Link](#)
A Next.js product-discovery and affiliate website with a modular component architecture, environment-based configuration, and a Dockerized deployment setup, built to present curated product recommendations through clean, fast-loading pages.
- WordPress Page Development – Moving & Storage Sites** [Project Link](#)
Contributed ongoing page-building and content-development work on two live WordPress sites, demenagement-blondeau.com and demenagementgauvin.com, which were built prior to my involvement. The work focused on extending page templates, layout sections, and content structure as part of continued WordPress development support.

EDUCATION

2017 - 2022	North South University BSc. in Computer Science and Engineering	University
2014 - 2016	Ideal College, Dhanmondi Higher Secondary Certificate	College
2004 - 2014	Dhanmondi Govt. Boys's High School Secondary School Certificate	School

EXPERIENCE

- 12/2025 – Present **WordPress Developer (Freelance)** **Ekomedia**
- Convert custom HTML designs into scalable, maintainable WordPress architectures using ACF and Custom Post Types, enabling faster content updates and reusable page-building patterns across client sites.
 - Engineer technical SEO foundations — including JSON-LD schema markup, semantic HTML5 structure, and metadata hierarchies — to improve search visibility and Rich Results eligibility for competitive service-based industries.
 - Improve site speed and Core Web Vitals scores through image compression, lazy loading, and CSS/JS optimization, delivering faster, mobile-first page experiences that support SEO and user retention.
 - Own QA and deployment for every release, running cross-browser testing and Rich Results/schema validation before go-live to guarantee each build meets technical and design specifications with zero post-launch defects.
- 7/2024 – Present **IT Administrator (Freelance)** **Cafe Lavista**
- Led the full development lifecycle for three business-critical WordPress properties, from requirements gathering and architecture through launch, reporting directly to the company director.
 - Strengthened platform reliability and security on the company's primary website through ongoing hardening, performance tuning, and content-delivery optimization, reducing downtime risk and maintenance overhead.
 - Deliver Tier 2/3 technical support for distributed remote teams, diagnosing and resolving hardware, software, and network issues to keep daily operations running without interruption.
 - Manage end-to-end IT administration — including access control, credential provisioning, and email/account management — while identifying and rolling out new tools to improve team productivity.
- 7/2023 – 8/2026 **Data Analyst** **Eagle 3D Streaming**
- Own end-to-end analytics implementation across GA4, Google Tag Manager, and YouTube Analytics, designing event tracking and dataLayer structures that give leadership an accurate, real-time view of user and revenue behavior.
 - Build and maintain interactive Looker Studio dashboards tracking core KPIs — subscriber growth, conversion rate, watch-time/user minutes, retention, and revenue trends — used by marketing and leadership for weekly decision-making.
 - Configure and audit GTM triggers, tags, and conversion events (including consent-aware tracking) to ensure reported revenue and conversions match actual transactions, catching and fixing tracking discrepancies before they skew reporting.
 - Translate raw analytics data into clear, actionable recommendations for marketing and product teams, driving a more data-driven approach to campaign and content decisions across the organization.
- 1/2023 – 6/2023 **IT Support Engineer** **n2sys Technology**
- Installed, configured, and maintained hardware, software, networks, and business applications to meet evolving operational requirements.
 - Served as first point of contact for staff and client technical issues, diagnosing system and network problems and delivering fast, effective resolutions.
 - Monitored infrastructure health proactively, identifying risks early to keep systems running at peak performance with minimal downtime.
 - Troubleshoot and resolved hardware and software faults efficiently, directly improving team productivity and reducing repeat incidents.
 - Supported rollout of new applications and maintained clear technical documentation to speed up future troubleshooting and onboarding.
- 8/2022 – 12/2022 **Coding Teacher** **Codingal**
- Taught coding fundamentals and computer applications to 4th- and 5th-grade students, translating the organization's curriculum into engaging, age-appropriate lessons.
 - Designed individualized learning paths tailored to each student's pace and goals, improving comprehension and long-term engagement with programming concepts.
 - Tracked student progress closely and provided targeted one-on-one support, ensuring consistently positive learning outcomes across a full student roster.
 - Drove course enrollment as a sales executive alongside teaching duties, directly contributing to organizational growth through effective parent and student outreach.

5/2022 – 7/2022 **Associate**

Quantanite

- Processed high-volume data entry tasks within a large-scale data pipeline, consistently meeting delivery deadlines while maintaining strict quality standards.
- Collaborated closely with team members to keep workflows seamless and uphold consistent, high-quality data output across the team.
- Validated and cleaned incoming data to ensure accuracy and integrity before downstream processing, reducing errors passed further into the pipeline.
- Evaluated and helped implement new data-processing tools and techniques, contributing directly to improved operational efficiency.
- Managed key data processing systems that supported and streamlined critical business workflows.
